

# 300mA Low Dropout Linear Regulator

## DESCRIPTION

The EUP7968 is a 300mA fixed output voltage low dropout linear regulator operating from 2.5V to 5.5V input. Typical ground current is approximately 90 $\mu$ A. Built-in output current-limiting and thermal-limiting provide maximal protection against any fault conditions.

The EUP7968 is available in 1.2V, 1.5V, 1.8V, 2.5V, 2.8V, 3V, 3.3V and 3.5V versions.

## FEATURE

- Very Low Dropout Voltage of 170mV at Output Current 300mA
- Guaranteed 300mA Output Current
- Low Ground Current at 90 $\mu$ A
- Stable with low ESR Ceramic Capacitors
- Fast Transient Response
- Current-limiting and Thermal Protection
- SOT23-3 and SOT89 Package
- RoHS Compliant and 100% Lead (Pb)-Free

## APPLICATIONS

- Voltage Regulator for LAN Card, CD-ROM, and DVD
- Wireless Communication Systems
- Battery Powered Systems

## Typical Operating Characteristics

Line Transient Response (COUT=1uF)

Line Transient Response (COUT=2.2uF)

## Application Information

### External Capacitors

Like any low-dropout regulator, the EUP7968 requires external capacitors for regulator stability. The EUP7968 is specifically designed for portable applications requiring minimum board space and smallest components. These capacitors must be correctly selected for good performance.

### Input Capacitor

A minimum input capacitance of  $1\mu\text{F}$  is required between the EUP7968 input pin and ground (the amount of the capacitance may be increased without limit). This capacitor must be located a distance of not more than 1cm from the input pin and returned to a clean analog ground.

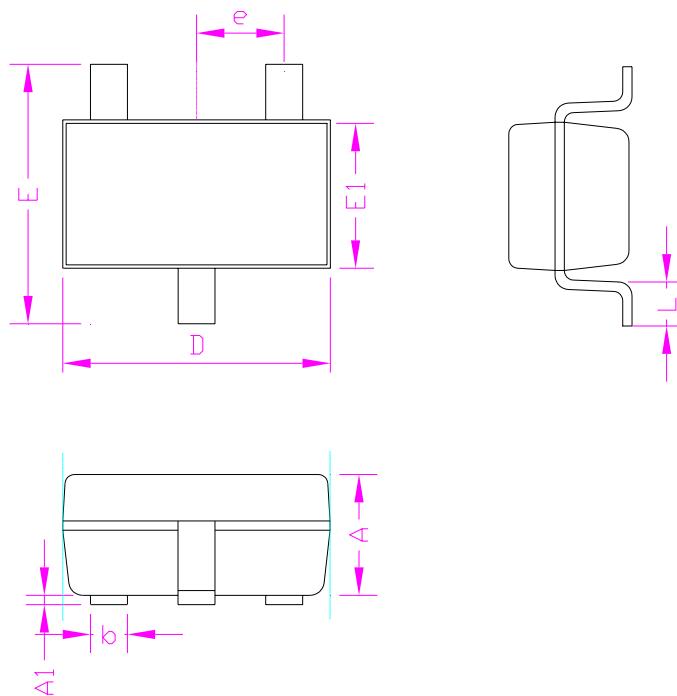

Any good quality ceramic, tantalum, or film capacitor may be used at the input. If a tantalum capacitor is used at the input, it must be guaranteed by the manufacturer to have a surge current rating sufficient for the application.

### Output Capacitance

The EUP7968 is specifically designed to employ ceramic output capacitors as low as  $2.2\mu\text{F}$ . Ceramic capacitors below  $10\mu\text{F}$  offer significant cost and space savings, along with high frequency noise filtering. Higher values and other types and of capacitor may be used, but their equivalent series resistance (ESR) should be maintained below  $0.5\Omega$ . Ceramic capacitor of the value required by the EUP7968 are available in the following dielectric types: Z5U, Y5V, X5R, and X7R. The Z5U and Y5V types exhibit a 50% or more drop in capacitance value as their temperature increase from  $25^\circ\text{C}$ , an important consideration. The X5R generally maintain their capacitance value within  $\pm 20\%$ . The X7R type are desirable for their tighter tolerance of 10% over temperature.
